workflows

Ashima offers a set of tools to help you automate routine approval processes into workflows.

By default, all workflows have the account owner as approver.

However, you can create custom workflows and assign it to a different admin or manager within your organization.

You can create and customize the following workflows:

Timesheet	Set up automated approval process for *timesheet adjustment*, *adding new timesheets*, *working on a rest day* and *working on a holiday*
Leaves	Automate routine approval of all leave applications. By default, approval of all leave types are centralized. You can however enable the advance leave workflow function to break down leaves into leave types allowing you to create workflows for each and every leave type.
Overtime	Set up automated approval process for employees working beyond the regular 8 hour shift.
Shifts	Automate the approval process of employees requesting to change their assigned shifts.
Maternity Benefits	Set up approval process for employees applying for maternity leave benefits.
Payroll*	Set up the routine approval proves of payroll. Payroll workflow is global and restricted. It is global because only one payroll workflow will be assigned to all your employees. While you can create a custom payroll workflow changing the approver from the default account owner to another admin account, this custom payroll workflow will replace the default and it will be assigned to all your employees. Payroll workflow is restricted because you can only assign it to admin accounts users.
Termination*	Similar to payroll, termination workflow is global and restricted. Set up global approval process for terminating employees and assign it to any admin account.
Documents*	Document workflow is global and restricted. Automate the global approval process of employment certificate requests.
Disbursements*	Disbursements workflow is global and restricted. Set up the global approval process of approving disbursement requests
13th Month*	13th Month workflow is global and restricted. Set up global approval process for approving all 13th Month Pay runs.
End of Year*	End of Year workflow Month is global and restricted. Set up global approval process for approving the end of year report.

*assignment of workflow approval is global and restricted to admin accounts

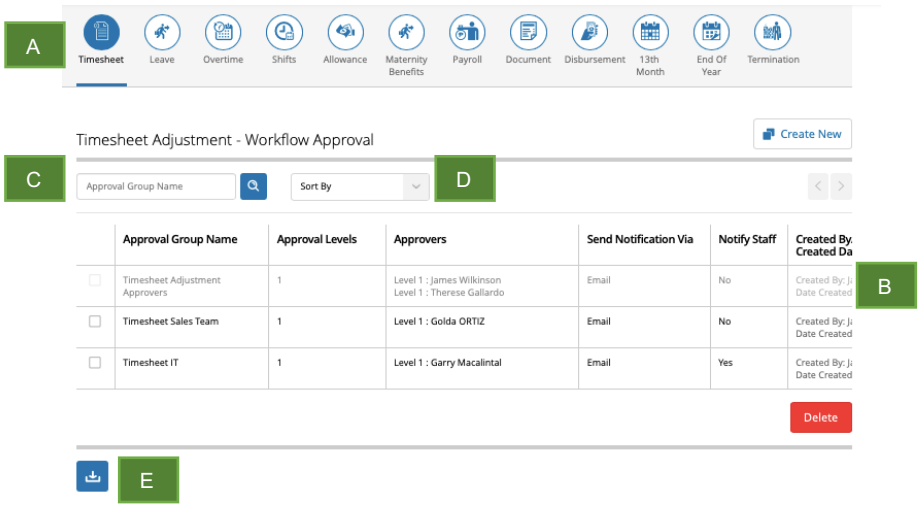

how to review your workflow settings and assignment?

On the navigation bar go to Settings/Workflow in your ashima admin account

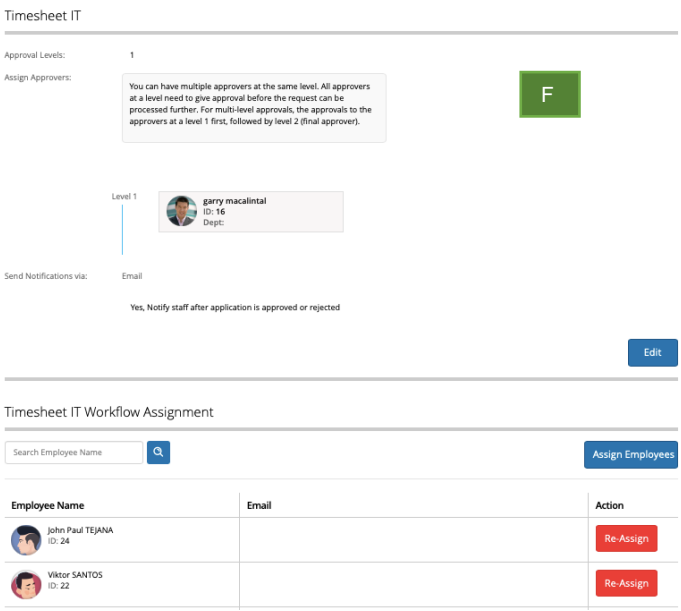

The circular tabs allow you to toggle from one workflow type to the other A

Click the name of a workflow to view a table listing all workflows created. The top most entry on the table (in gray) is the default workflow assigned by the system. Default workflows are not editable nor can you delete them. B

The table listing is searchable C , sortable D and downloadable. E

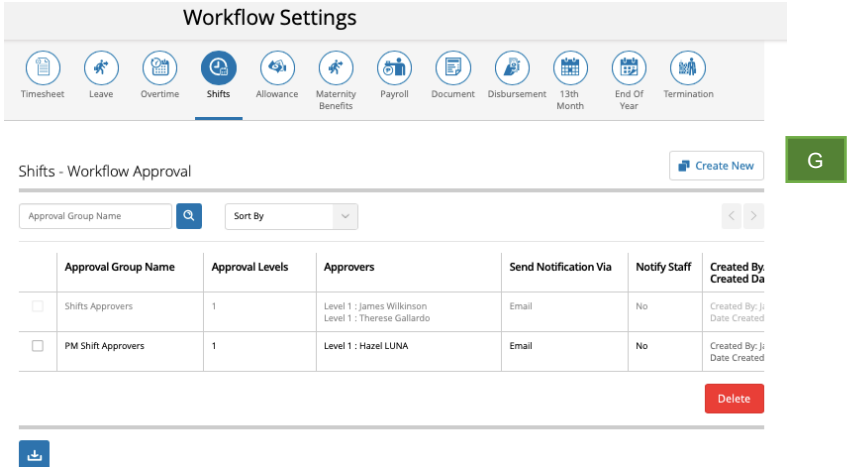

Click on the workflow item on the table row to drill down on the details of a specific workflow and find out who the approvers are as well as employees assigned. F

ashima

how to add a new workflow?

If you want to create your own custom workflow click on the *create new button* found on top of each workflow table. G

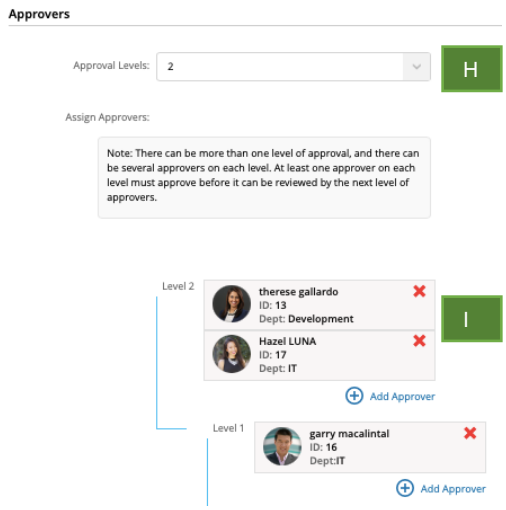

When creating new approval workflows please make sure to use a unique workflow name and avoid using symbols and characters.

Workflows in ashima allow for multi-level approval, and multi-assignment of approvers. H

In ashima there can be more than one level of approval. You can create up to 5 levels of approval. Please note however that by adding more levels in the approval process the routing will take longer as the request has to be approved on each and every level before it moves on to the next.

There can be several approvers on each level. At least one approver on each level must approve before the request is routed to the next level of approvers. I

You can assign an admin, a manager or an employee to be an approver on custom workflow you've created except for restricted workflows, such as payroll, termination, etc. You can only assign admin accounts as approvers to restricted workflows.

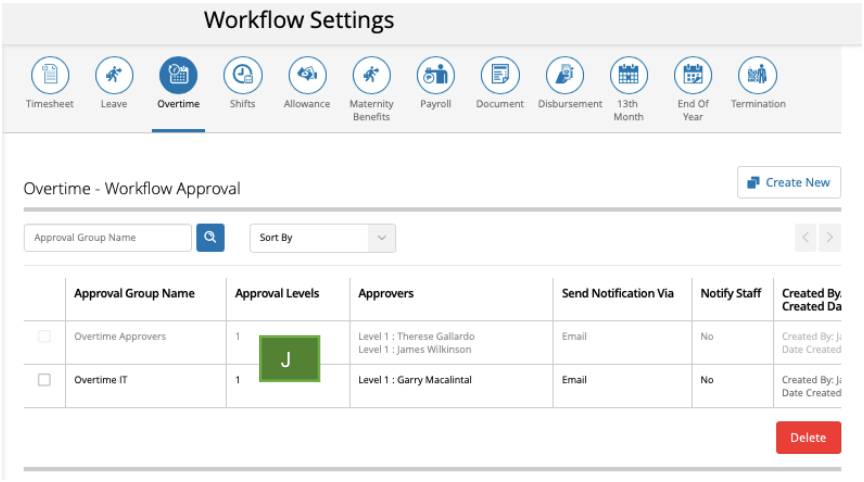

ashima

how to reassign employees to a new custom workflow

By default, all employees will be assigned to the *default* workflow which is a single level workflow that routes to the ashima account owner.

You can reassign employees to the new workflows you've crated either by individual assignment or by bulk workflow upload.

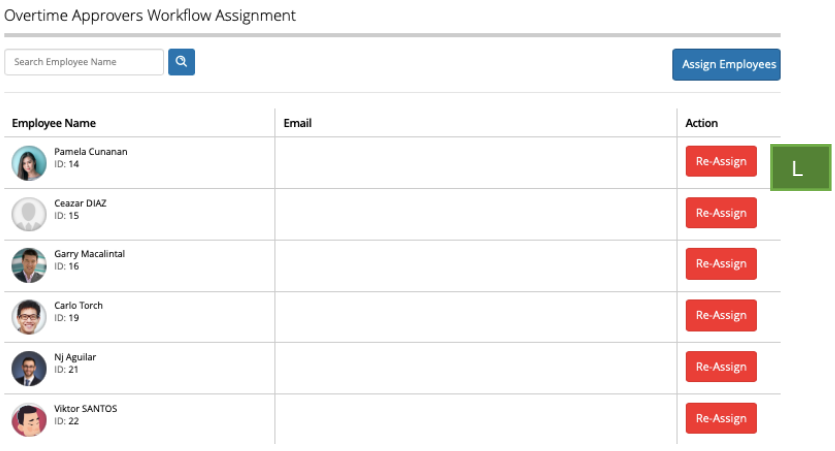

To reassign individual employees to a new workflow that you created, go to Settings/Workflow and choose the workflow type. On the table list view of all workflows, click on the current workflow item on the table to view the details. J

On the details page, scroll down to see the employees assigned to the current workflow. K

Click on reassign so a form opens allowing you to reassign a different workflow to an employee. L

K

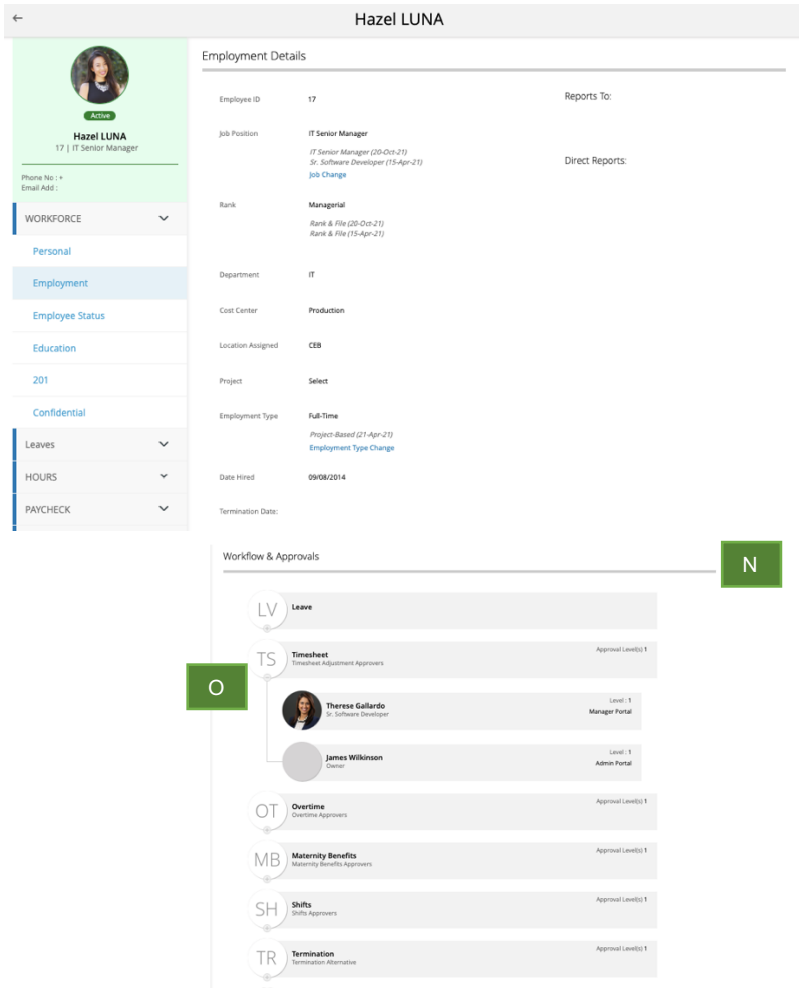

ashima

Choose which new workflow group to re-assign the employee and submit. A drop down is provided listing down all workflows that have been created for you to choose from. M

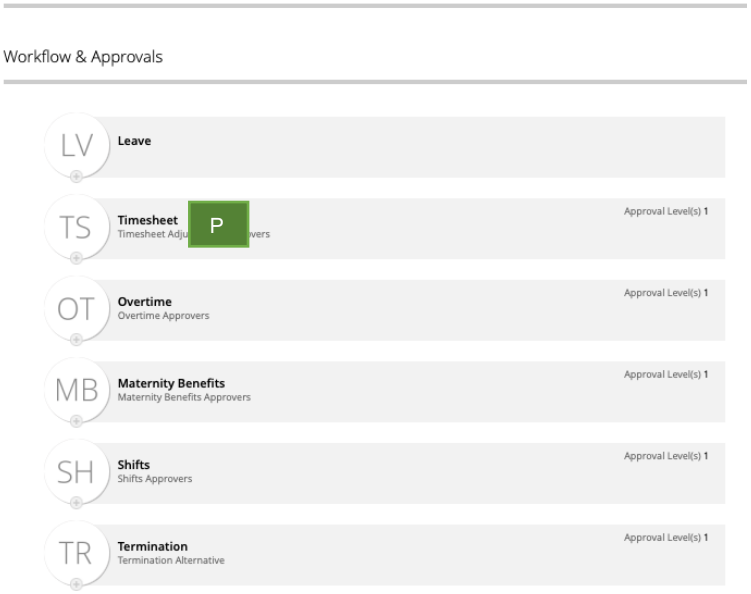

If you are viewing the workflow from the employment details page of the employee, scroll all the way down to the Workflow Approvals. N

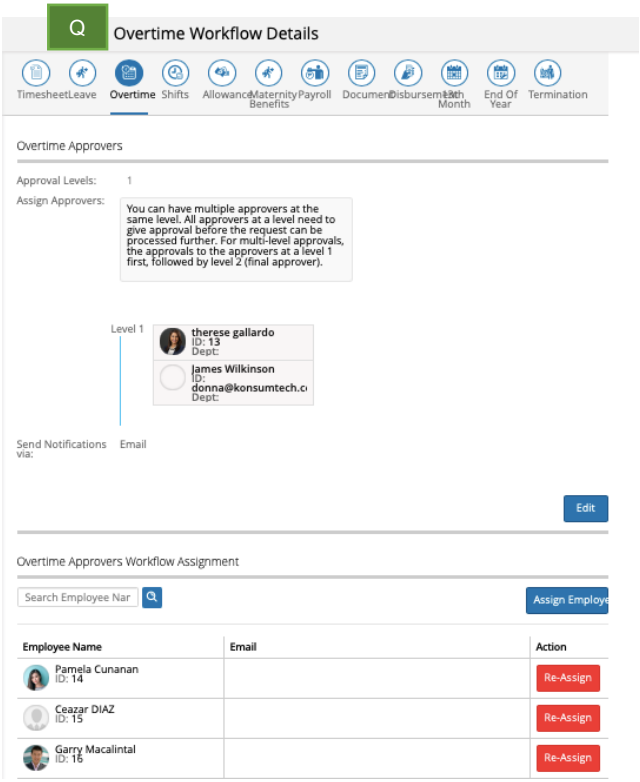

Click on the “+” sign to expand the workflow allowing you to view the details of the workflow assigned. O

Click on the Main Workflow name and it will lead you the specific workflow settings allowing you to reassign the employee to a different workflow. P

Clicking the Main workflow name will lead you to the workflow details settings allowing you to re-assign the employee to a new workflow. Q

how to upload workflows in bulk

In cases where you need to reassign a group of employees to a new workflow you can use the buk upload function.

To upload workflows in bulk go to settings/upload manager/workflow approval and download the upload template (Workflow_Approval_Impirt_V3.2.2).

Workflow_Approval_Import_V3.2.2(05-23-2022)

Employee ID	Workflow Approvals Type	Workflow Approvals Name
1001'	Timesheet	Timesheet IT
1001'	Overtime	Overtime IT
1001'	Shifts	Shift IT
1002'	Overtime	Overtime Sales
1002'	Shifts	Shift Sales

However if you enabled the advance leave settings, a different format is required to allow you to specify which leave type workflow is being uploaded. Please see sample template below.

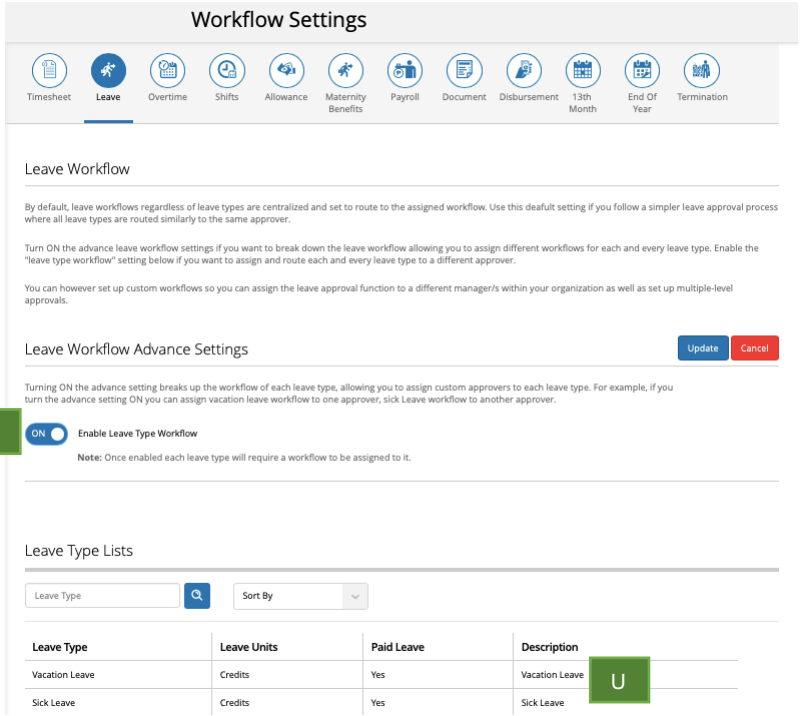

Workflow_Approval_Import_V3.2.2(05-23-2022)

Employee ID	Workflow Approvals Type	Workflow Approvals Name
1001'	Leave|Sick Leave	Sick Leave IT
1001'	Leave|Vacation Leave	Vacation Leave IT
1001'	Leave|Sick Leave	Sick Leave Sales
1001'	Leave|Sick Leave	Sick Leave HR
1001'	Leave|Sick Leave	Sick Leave Finance

how to enable advance settings for leave workflow

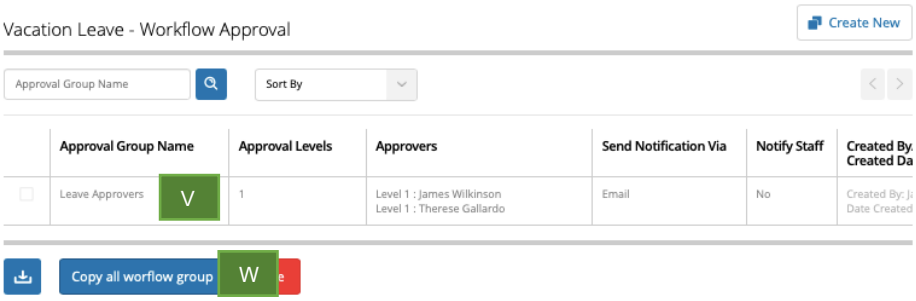

By default leave approval is centralized. All leave types will be routed to the same workflow approver.

Turning on the advance settings will trigger the system to break down all leave types created and allow you to create custom workflows for each leave type. This is particularly useful if you plan on assigning a different approver for each leave type.

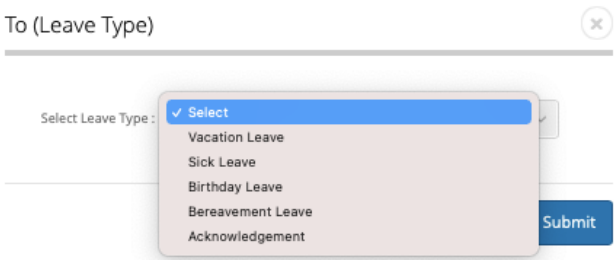

Click on the leave type list table to view the approval workflow of a specific leave type. U

Click on the approval group item to open the details page where you will see the assigned approver as well as the employees assigned to this particular leave type workflow. V

The **copy all workflow group function** allows you to duplicate an existing workflow in leaves, wherein all of its configurations as well all the employees assigned to that specific workflow, will be copied over to the new leave type you created. W

To complete the copy, specify which leave type you want it copy the workflow group function to.

ashima

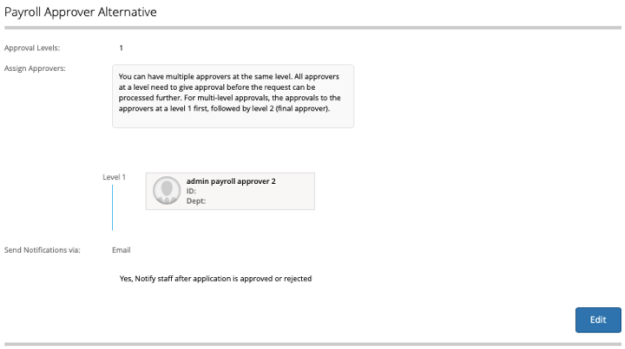

how to customize global workflows?

By default, all workflows have the account owner as approver. You can create custom workflows allowing you to change the approver from the account owner to another admin account.

However workflows that are catergorized as global, such as payroll, termination, disbursement, 13th month, end of year and documents, do not require reassignment to the employees. Their global nature means that once you create a custom workflow it will globally be assigned to all employees. On the workflow settings detail page you will not see the workflow assignment function for all global workflows.

X

For example if you create a custom payroll approver workflow (i.e. Payroll Approver A), this will automatically replace the default workflow that was previously assigned. If in the future you will create another new custom payroll approver (i.e. Payroll Approver B) this will automatically replace the previous Payroll Approver A that was assigned.

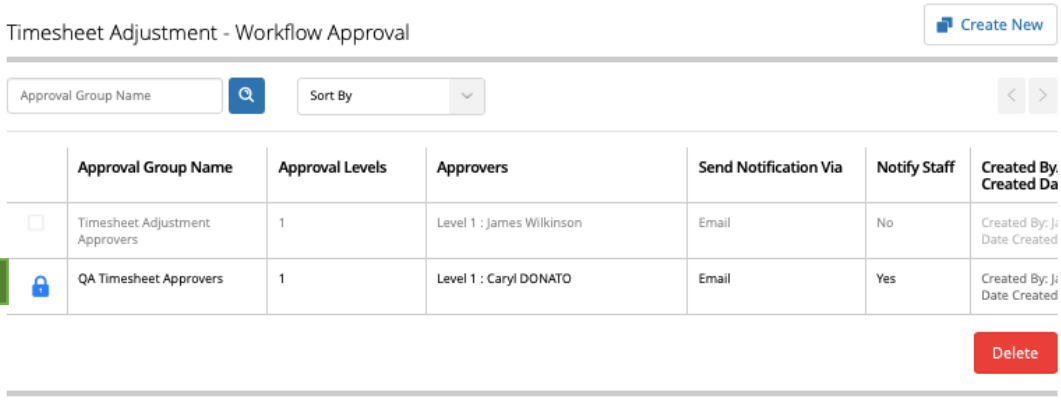

X

how to delete workflows?

You will not be able to delete system generated default workflows.

You can however delete custom workflows that you created. There is a lock icon on the workflow list table that signifies that you are prevented from deleting a custom workflow because there are pending request for approval that will be affected.

Y

Y

Make sure you do not have any pending request items that will be affected if you plan on deleting a particular workflow.
