ADMIN

HOURS

ver 07.15

ashima

HOW TO ACCESS THE ADMIN PORTAL?

1. Log in to Ashima (www.ashima.ph)

   Reminder:
   As admin you will most likely have two accounts in Ashima—an ADMIN account and your own EMPLOYEE account (two unique email addresses).

   Logging in to your admin account using your admin credentials allows you to onboard employees, configure settings, assign entitlements, run payroll, and etc.

   Log in using your Employee portal credentials to view your own timesheet, shift assigned, leaves and payslip.

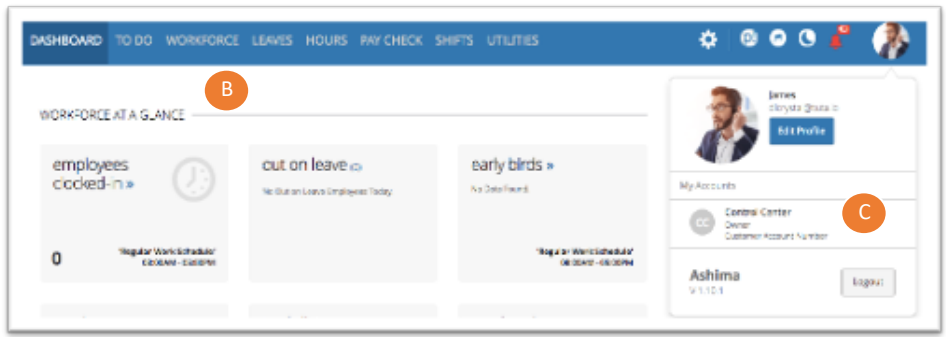

2. If you have a standard admin account once you log in, you will be directed to the Admin Portal where you can onboard employees, view and manage all pay related items for all employees (including but not limited to timesheets, shifts, leaves, compensation, earnings and deduction, run payroll, run reports, and etc.)

3. If your admin account is the root/owner, you will have all admin rights mentioned above as well as access to the Control Center. This will allow you to create additional admin accounts as well as add more businesses to your current account.

A

B

C

HOW TO TRACK TIME?

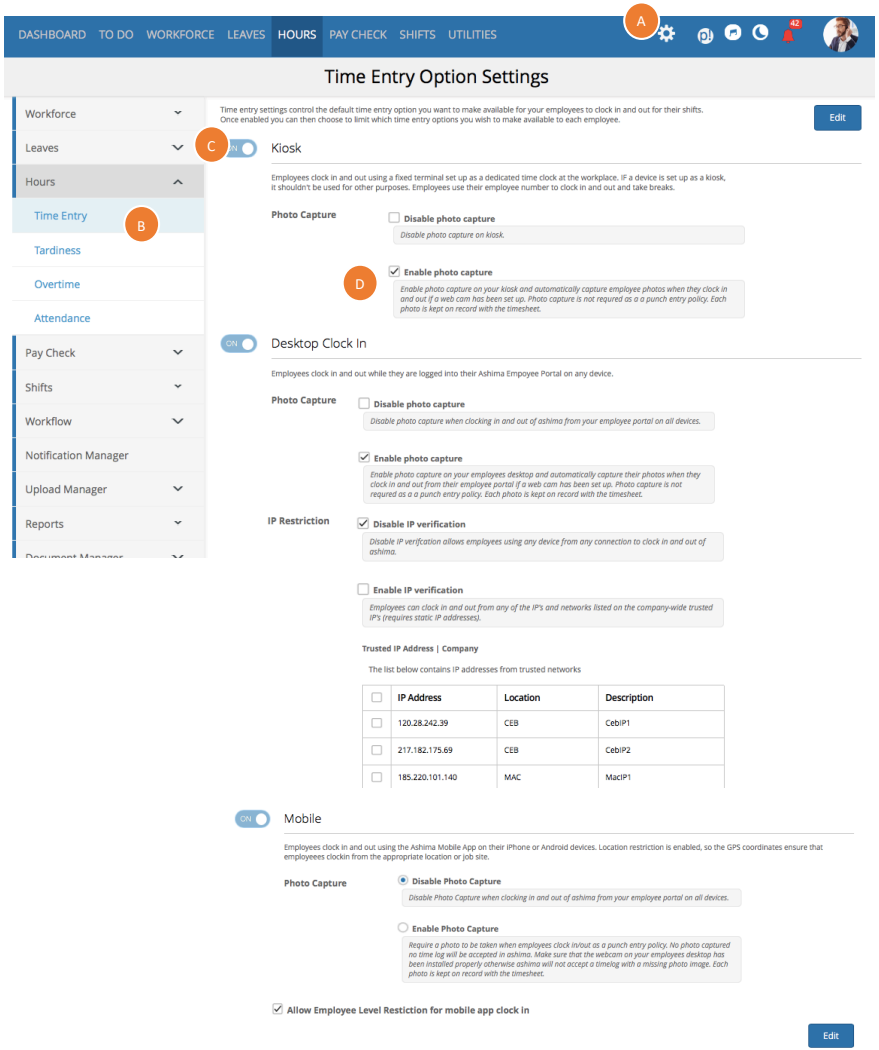

Tracking time using mobile, kiosk, desktop and timesheet import. Time entry settings control the **default time entry option** you want to make available for your employees to clock in and out for their shifts. Once enabled you can then choose to limit which time entry options you wish to make available to each employee.

Go to **Settings>Hours>Time Entry Options**

A → B

I. KIOSK

1. Enable the kiosk if you want employees to clock in and out using a fixed terminal as a dedicated time clock at the workplace. You can set up several kiosks for your company. (C)
2. You can choose to enable photo capture so the kiosk automatically captures an image of employee as they punch in and out. Each photo is kept on record with the timesheet. Enabling this requires that your kiosk has a web cam. (D)

KIOSK

Employees use their employee number to clock in and out and take breaks.

II. DESKTOP CLOCK IN

1. TURN ON the **Desktop Clock In** if you want employees to clock in and out while they are logged in to their Ashima Employee Portal on any device. A

2. Tick on **"Enable photo capture"** so an image of employee is taken via web cam as they punch in. Each photo is kept on record with the timesheet. B

   Note: Webcam is required if photo capture is enabled. If employee's device does not have a webcam it will not capture the timesheet.

3. Tick on the **IP Restriction** to limit employees from clocking in and out on devices that are connected only on whitelisted IP's & networks registered by admin. C

4. Register and whitelist your company IP addresses by Adding it to the list D

   Note: Set up the location of the whitelisted IP so timesheet captured will include the correct location. You can configure location and sites under **Settings>Workforce>Location & Sites**

5. Enable the **Authenticator** if you want employees to make use of their mobile authenticator app to verify their identity. E

6. Enable employee level customization of time entry by ticking on the "**Allow Employee Level Restriction for desktop clock in**" box. A

7. Once enabled, you can then customize the time entry on a per employee level. Choose to assign the following: B

   (i) Limit time entry option for an employee (i.e. allow kiosk clock in and disable desktop clock in)

   (ii) Register a whitelisted IP and assign it to a specific employee

   (iii) Require photo capture for a specific employee

   Note: Employee level restriction can be enabled for Desktop Clock In.

8. If an employee logs in to his employee portal and does not see a time clock page, it is most likely because:

   (i) the admin disabled desktop clock in for the employee

   (ii) employee timekeeping rule is set to no timesheet required

DESKTOP CLOCK IN

Access to desktop clock in is via the Employee Portal. After successfully logging in to the Employee Portal, the user is redirected to the TIME CLOCK page under the home tab.

Note: If the employee does not see a time clock page after he logs in to the portal, that means admin has disabled desktop clock in for said employee.

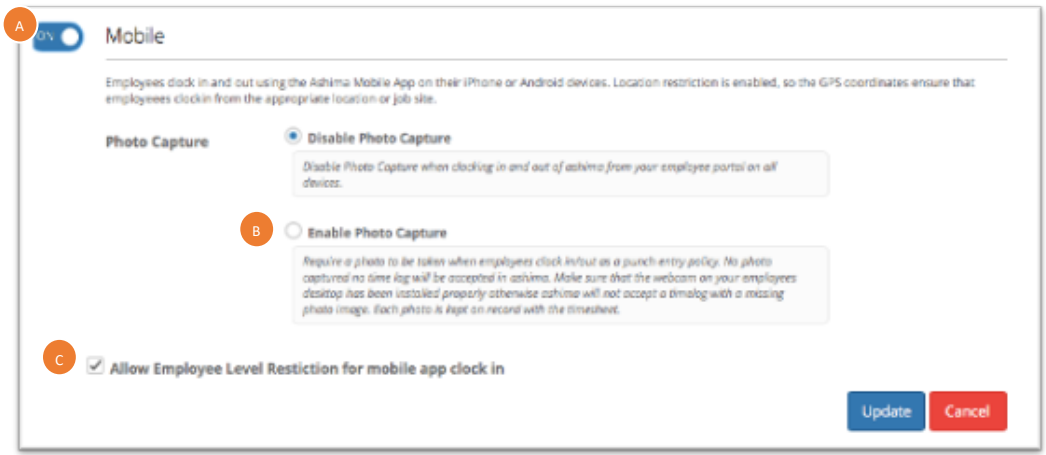

III. MOBILE APP CLOCK IN

1. TURN ON the **Mobile** clock in method to allow your employees to clock in and out using the Ashima app on their iPhones and Android phones.

2. GPS location is enabled, so the GPS coordinates checks and reports the location of the employee when he punched in. All clock ins via mobile go through an approval process where admin can then verify if the employee is clocked in from the appropriate location or job site before approving his timesheet.

3. Tick on "**Enable photo capture**" so an image of the employee is taken by the app as they punch in. Each photo is kept on record with the timesheet.

4. Enable employee level customization of time entry by ticking on the "**Allow Employee Level Restriction for Mobile clock in**" box

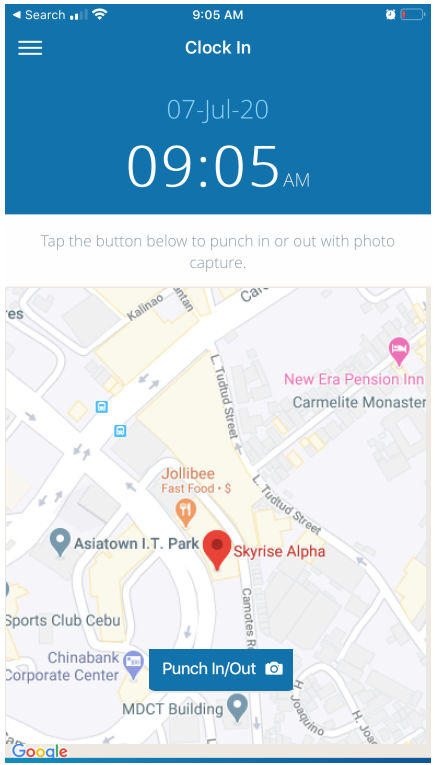

MOBILE APP CLOCK IN

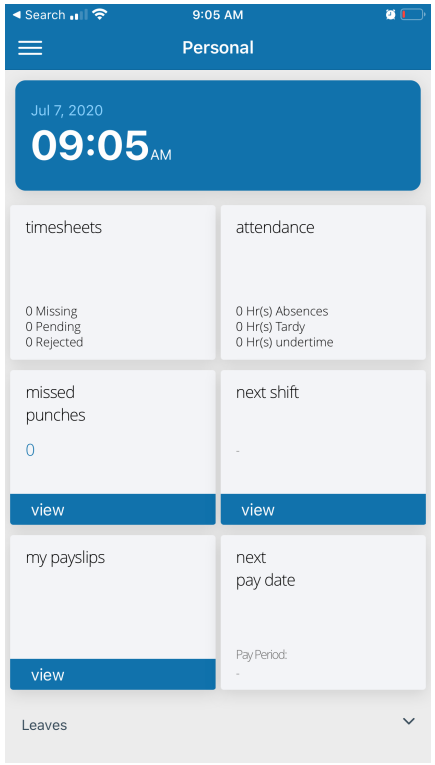

Download the Ashima mobile clock in via apple store (IOS devices) and play store (android devices).

If enabled employees can clock in and out from their mobile app with geo-location attached to each log.

.

With photo and geo-location tracking with every clock in event, you can be confident the timesheet data is accurate

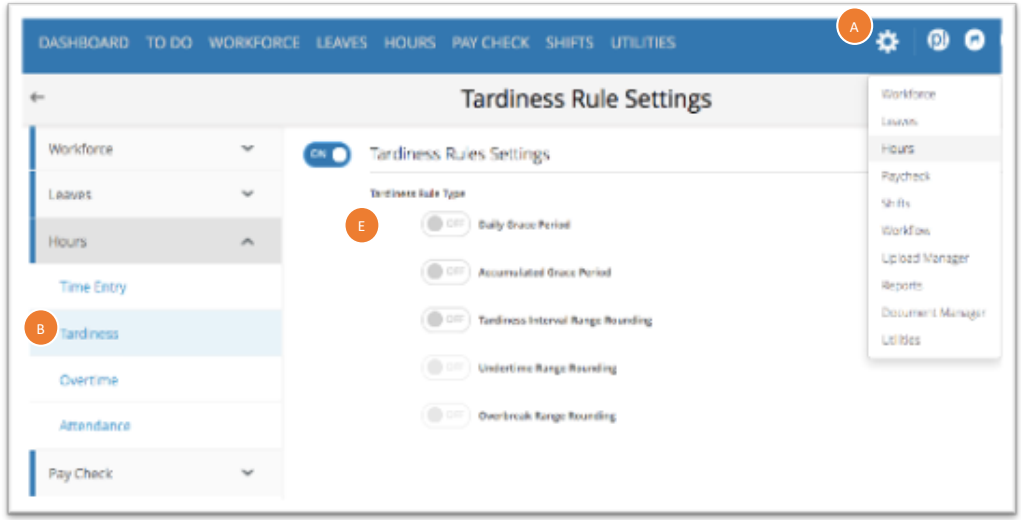

HOW TO SET UP TARDINESS RULES?

1. To set up tardiness rules go to Settings>Hours>Tardiness. A → B

2. In Ashima tardiness is recorded based on two events:
   - (i) LATE – Employee shift started and he fails to clock in on time C
   - (ii) OVER BREAK – Employee has a fixed lunch break or short break and he fails to punch back in (lunch in or break in) on time. D

GRACE PERIOD RULES WHEN EMPLOYEES ARE LATE:

There are four configuration types for how the system should handle the GRACE PERIOD when your employees are LATE.

Note: Grace period can be used to give shift workers leeway when starting their shift. You can choose how many minutes the employee can be late while still getting credit for working the full shift.

I. NO GRACE PERIOD

Turn OFF the all Tardiness Rule setting so no grace period will be applied when employees are LATE. Employees' tardiness are captured as is. E

TIMESHEET SAMPLE

II. DAILY GRACE PERIOD

1. TURN ON the 'Daily Grace Period' if your tardiness rule is calculated daily. A

2. Set the number of daily grace period in minutes. B

3. Specify the rule you want Ashima to follow. Set rules to calculate tardiness to: Start at the Shift Start Time or Start at the End of the Grace Period. The difference on how the system interprets tardiness is illustrated below.

	Shift Start Time	Daily Grace Period	Actual Clock in Time	Tardiness
Starts at Shift Start Time	8:00 AM	10 mins	8:11 AM	11 mins
Starts at End of Grace Period	8:00 AM	10 mins	8:11 AM	1 min

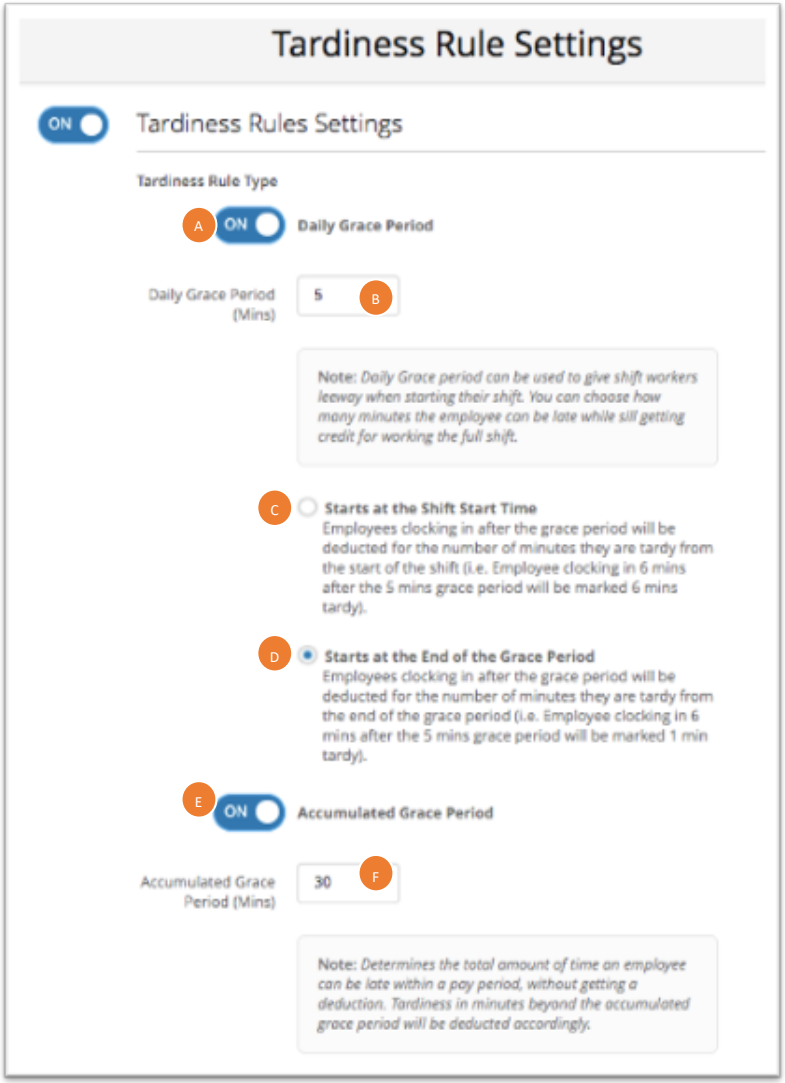

C

D

III. ACCUMULATED GRACE PERIOD

1. TURN ON the 'Accumulated Grace Period' if your tardiness rule is added together and calculated within a pay period. E

2. Set the number of accumulated grace period in minutes. F

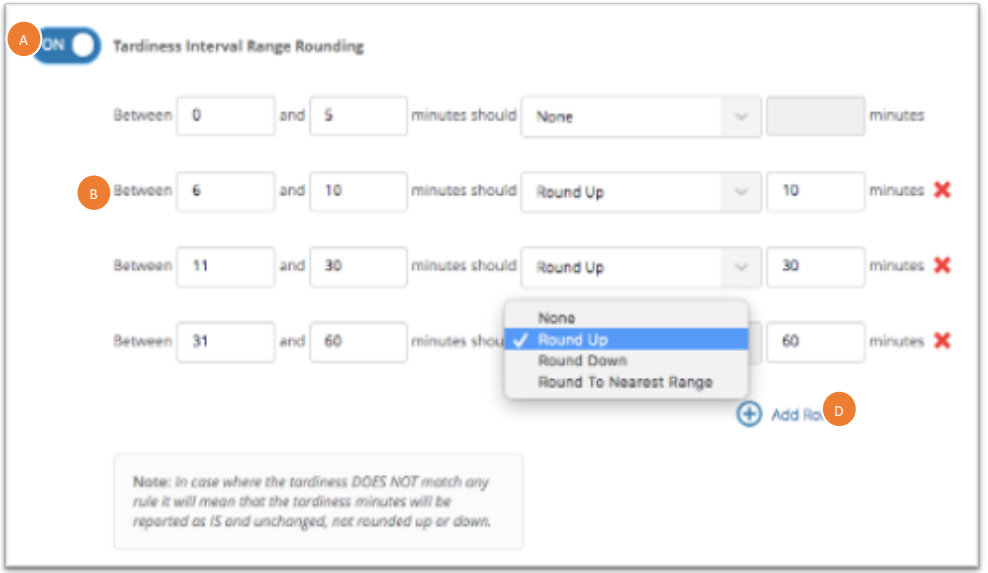

IV. INTERVAL RANGE ROUNDING

1. TURN ON the '**Tardiness Interval Range Rounding**' if you require several rules to interpret the grace period depending on the number of minutes the employee is late.

2. You can set the category range of the tardiness in minutes and specify how you want the system to interpret it – whether to round up, round down or round to nearest range.

3. Click on '**Add Row**' to add as many category ranges as required by your company policies

4. In cases where the tardiness does NOT match any of the range rule rounding listed, it will report the tardiness minutes AS IS without applying any rounding rules.

GRACE PERIOD RULES FOR OVERBREAK:

I. INTERVAL RANGE ROUNDING FOR OVERBREAKS

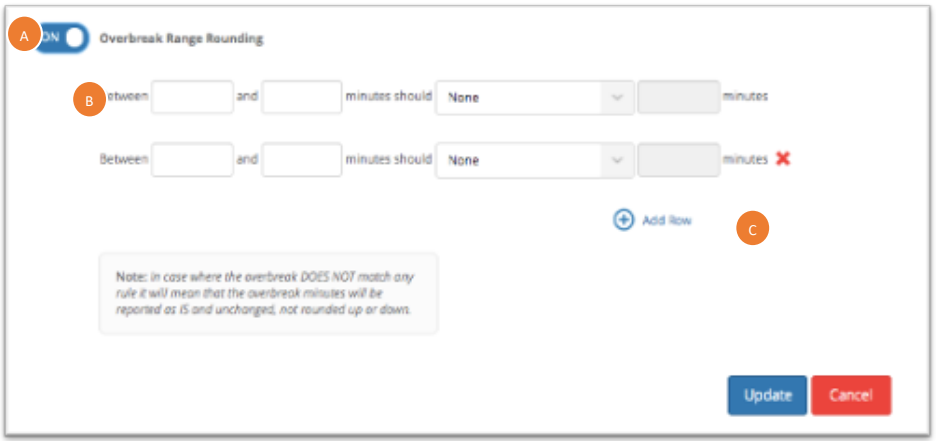

1. TURN ON the '**Overbreak Range Rounding**' if you want to track employees who are late from punching back in after taking their breaks. (A)

   Note: Overbreak occurs if employees have fixed lunch and other breaks and they fail to punch back in (lunch in, break in) on time.

2. You can set the category range of the tardiness in minutes and specify how you want the system to interpret it – whether to round up, round down or round to nearest range. (B)

3. Click on '**Add Row**' to add as many category ranges as required by your company policies (C)

4. In cases where the overbreak mins does NOT match any of the range rule rounding listed, it will report the tardiness minutes AS IS without applying any rounding rules.

HOW TO SET UP UNDERTIME RULES?

1. To set up undertime rules go to Settings>Hours>Tardiness.

2. In Ashima undertime is recorded if an employee clocks out early from a fixed shift or has less than the required hours set for a flexi shift.

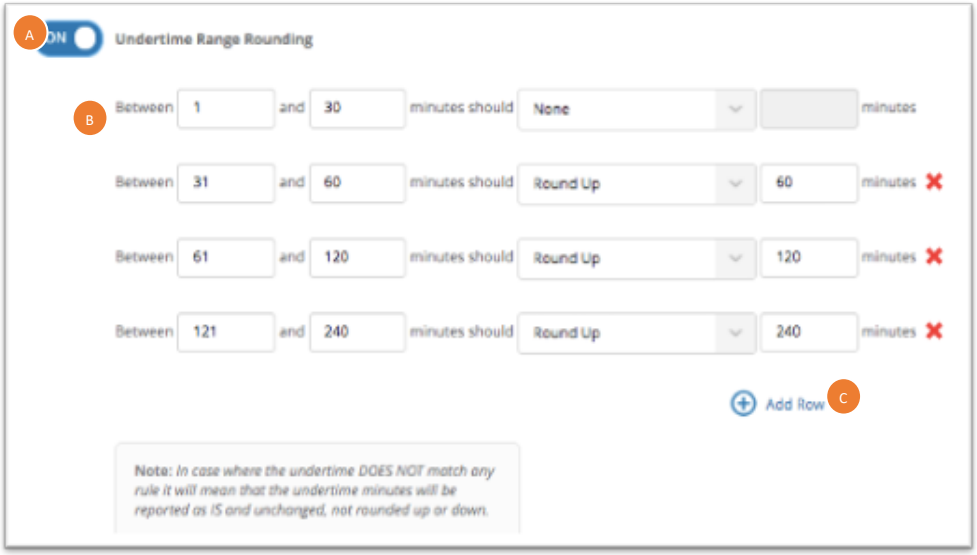

3. There are two ways undertime is reported and interpreted in Ashima.
   (i) DEFAULT - The default is that undertime in minutes is calculated based on the actual timesheet of employees against their assign shift for the day.

   Note: This is a default rule and no setting needs to be configured for Ashima to report this.

   (ii) UNDERTIME RANGE ROUNDING - If you do not want to use the default undertime rule and want to configure several rules based on the range of undertime minutes, TURN ON the undertime range rounding rule. A

4. You can set the category range of the undertime in minutes and specify how you want the system to interpret it – whether to round up, round down or round to nearest range. B

5. Click on 'Add Row' to add as many category ranges as required by your company policies C

HOW TO SET UP OVERTIME RULES?

1. To set up undertime rules go to Settings>Hours>Overtime.

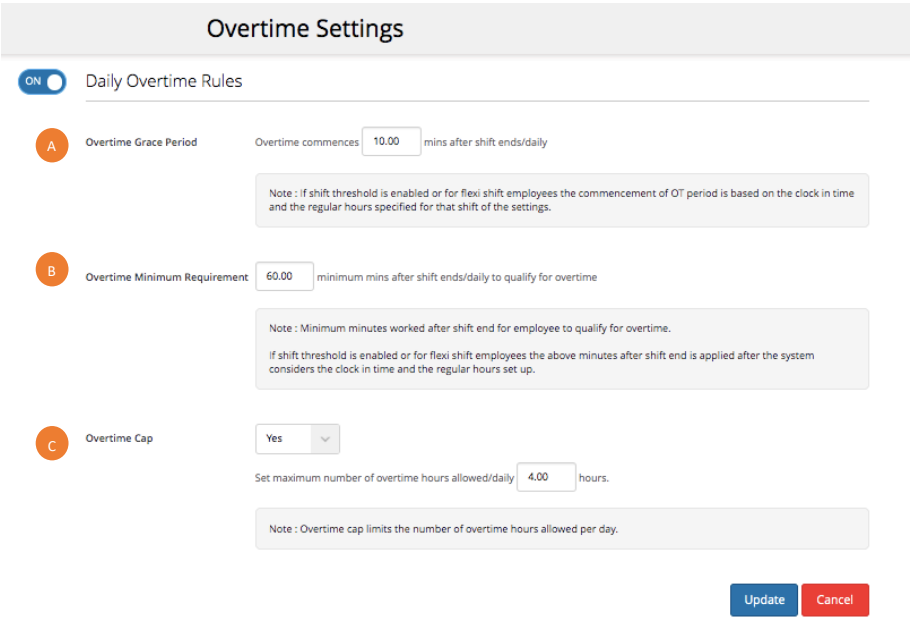

2. In Ashima, the overtime (OT) default setting sets it to be calculated after the employee shift ends. However you can set certain rules for OT (such as grace period, minimum requirement, and cap).

   Note: There are no pre-shift overtime for ashima.

3. Set the rules on when OT commences by configuring 'Overtime Grace Period'. Specify the the number of minutes after end of shift for overtime to begin.

4. Set the rules on 'Overtime Minimum Requirement' to configure how many minutes must be rendered by the employee to qualify for OT.

5. Set the rules on 'Overtime Cap' to configure a limit to the number of hours an employee can render OT in a day.

TIMEKEEPING BASICS

Automate timesheets

When an employee logs their hours in Ashima, it is recorded and a timesheet is automatically created for that shift. This will remove any need for manual submission of timesheets.

Paired with Shifts

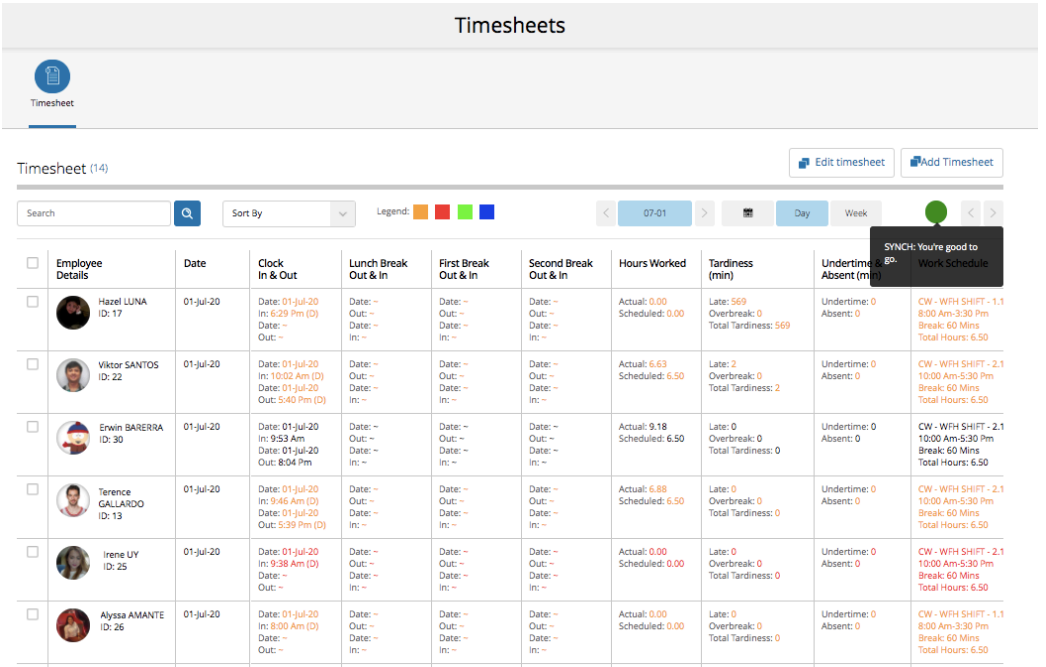

In Ashima the HOURS module simply captures the time logs.

Timesheets are always paired with shifts, because the shift provides the full context as to how the timesheets are interpreted. For example, the rules specifying the following are all determined by the shift that's assigned to an employee:

- how many punches are required in a workday
- specified clock in and out time
- which days are workdays and rest days

Multiple Time Tracking Option

Choose your preferred method for your staff to clock in and out — whether that be from kiosk, desktop, or mobile app. Our multiple time clock options help you collect timesheets you can trust.

TIMEKEEPING OVERVIEW

B TIMESHEET OVERVIEW

Orange – with possible error due to missing logs, tardiness and undertime
Red – shift was changed/updated after the fact or after logs were recorded.

Green – employee-initiated adjustments to the timesheet
Blue – admin-initiated adjustments to the timesheets

Legend:

F ASSIGNED SHIFT

CW – Compressed Shift

RW – Regular Shift
FT – Flexi Shift

OS – Open Shift

Excess – Excess Logs

RD – Rest Day

C STATUS

Pending – request submitted waiting for approver
Approved – request submitted and approved

"~" – no adjustment initiated

D HOURS WORKED

Actual – from clock in to clock out
Scheduled – based on shift

Employee Details	Date	Clock In & Out	Lunch Break Out & In	First Break Out & In	Second Break Out & In	Hours Worked	Tardiness (min)	Undertime & Absent (min)	Work Schedule	Source	Status	Location	Project

(D) – desktop
(K) – kiosk
(M) – mobile

Collective

Desktop – desktop
Kiosk – kiosk

EP – employee portal
Dashboard – admin portal
Import – timesheet was uploaded

HOW TO VIEW TIMESHEETS OF EMPLOYEES?

1. All logs captured in Ashima regardless of source (i.e. kiosk, desktop, etc.) are viewable on the TIMESHEEETS page. Go to Hours>Timesheet.

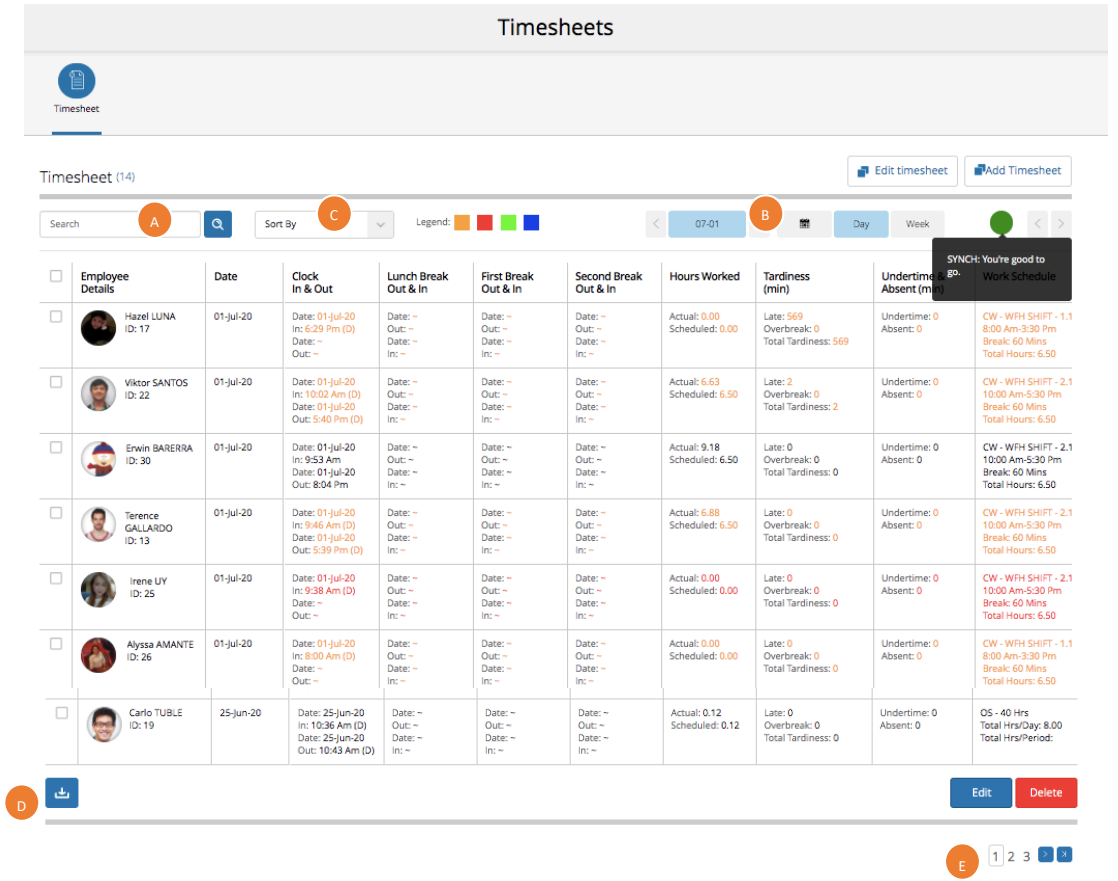

2. Use the **search function** to look for timesheets of specific employees. (A)

3. Use the **date filter** to limit view to a particular day, week or custom date. (B)

4. Use the **Sort By** drop down to choose how you want the list displayed to be sorted out. (C)

5. Use the **download button** to download timesheets Note that filter downloading of timesheets is limited only to employees reporting directly to you. (D)

6. Use the **pagination** to move from page to page. (E)

HOW TO RECALCULATE TIMESHEETS?

Timesheets are recalculated automatically if triggered by any of the following events:

(i) after a time log is captured, the system pairs the logs against the shift assigned to provide the context needed to display tardiness, undertime and hours worked within 2 mins.

(ii) after a change in any of the hours settings by the admin – tardiness and overtime.

(iii) after timesheets are captured for the day and the shift is updated/changed.

(iv) after a recent upload of timesheets.

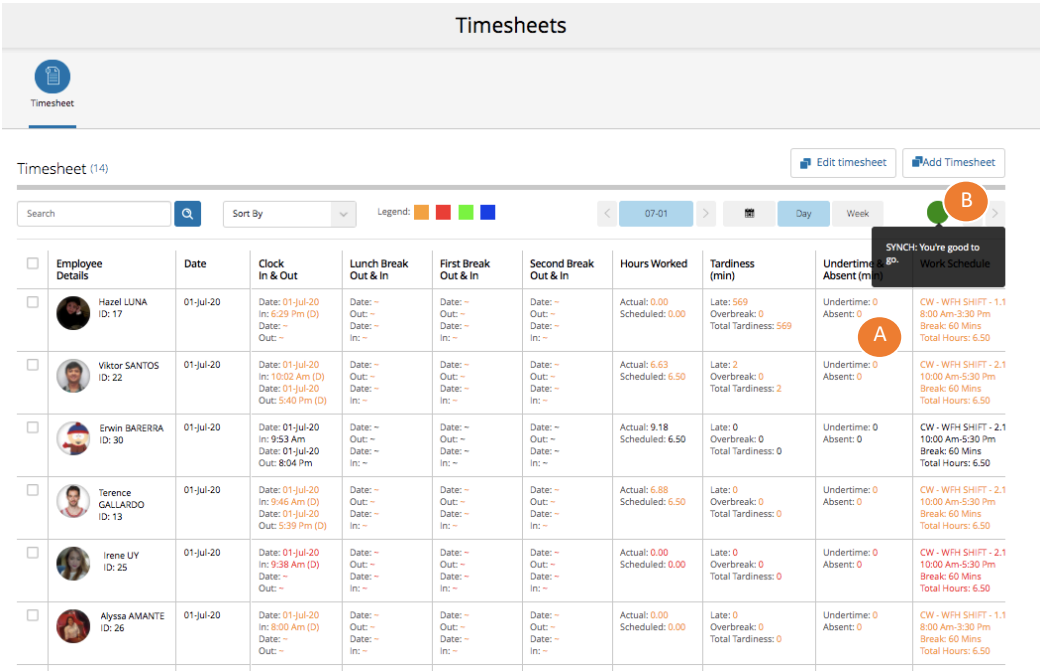

A

The recalculation/synch button will be displayed in green if all items mentioned above have successfully been recalculated.

B

The recalculation/synch button will display red if the timesheets are not in synch and require you to manually recalculate. Please click on the red button to manually force recalculation.

Important: Whenever you see the red button please make sure to manually recalculate the timesheets so that the latest updates will be displayed to both admin and employee. Also a non recalculated timesheet will cause discrepancy to the pay during pay run.

HOW TO EDIT TIMESHEETS?

1. If you want to edit a specific timesheet or several timesheets at one time, tick on the checkbox to select and click on the blue ‘Edit’ button found at the bottom of the table.

2. The details of the selected timesheets will be displayed on the ‘Edit Timesheet’ page. The fields are editable for you to input the changes.

   Reminder:
   Make sure you assign the correct time reference if it’s AM or PM.

   For NIGHT SHIFT logs, please make sure to enter the correct dates along with the time.

   If the shift REQUIRES lunch in/out or breaks, make sure to fill these up.

3. Once done click on the ‘Save’ button below the table.

4. If you want to go directly to the Edit Timesheet page without selecting any specific timesheet to edit, click on ‘Edit Timesheet’ button found at the top of the table.

HOW TO ADD TIMESHEETS?

1. There are two ways admin can add timesheets to employees—the first is to add individual timesheets and the second is to upload timesheets in bulk.

2. To add timesheets to employees individually, click on the '**Add Timesheet**' button found at the top of the table.

3. On the Add Timesheet page fill up all the REQUIRED time log fields. (Note: If the shift requires lunch breaks and other breaks, you need to fill it up as well.)

   Reminder:
   Make sure you assign the correct time reference if it's AM or PM.

   For NIGHT SHIFT logs, please make sure to enter the correct dates along with the time.

   If the shift REQUIRES lunch in/out or breaks, make sure to fill these up.

4. Click on the '**+ button**' to add more timesheets and submit it at one time.

5. Once done click on the '**Submit**' button below the table.

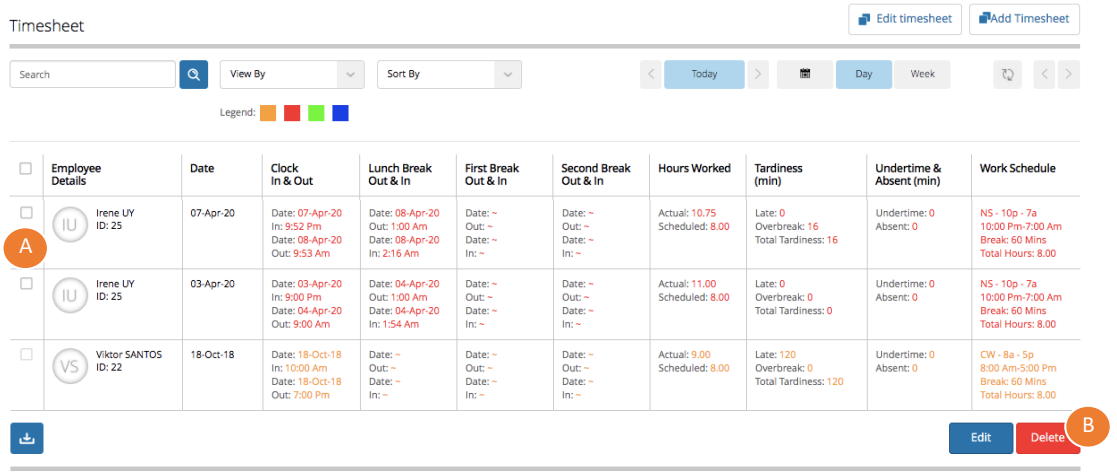

HOW TO DELETE TIMESHEETS?

1. Tick on the checkbox of timesheets you want to delete. Click on the red 'Delete' button found below the table.

2. A warning notice will display to confirm if you wish to proceed.

Important: Please note that once timesheets are deleted, we can no longer revert it back.

WHO IS EARLY TODAY?

1. To view a list of employees who came to work early, click on Hours>Punctuality>Early Birds. (A → B → C)
2. The list will display the names of early bird employees for today. You can use the date filter to change the dates. (E)
3. Use the search function to drill down to a specific employee. (F)

WHO ARE LATE FOR WORK?

1. To view a list of employees who are late for work, click on Hours>Punctuality>Tardy. (A → B → D)
2. The list will display the names of employees who are late for work today. You can use the date filter to change the dates (G)
3. Use the search function to drill down to a specific employee (H)
